

## Waste Heat Recovery Potential Locations October, 2015

This list below represents those compressor units on **Ozark Gas Transmission** that meet or closely meet the economic criteria set out in the INGAA White Paper on Waste Heat Recovery of at least 15,000 horsepower operating at or more than a 60% load factor rate.

**Ozark Gas Transmission currently does not have any compressor stations that meet the criteria specified above. Ozark Gas Transmission will review this on a regular basis and update this as facility changes and technology enhancements dictate.**
